Project

THE STORY

We need an ecommerce website where users can buy products.
Users can see their orders,and sellers can add products and see their products .

Here's what we need
- product
    - Products have name, description , photo, seller and creation date
    - Users can search using either the name or the seller name

- Seller
    - Sellers have name, products
    - Sellers can see , edit , delete , create products.
    - Each seller can access only his products

- Cart
- Create cart
- Update cart (only by admin or the user who created it)

- Order
    - Each order has created date and products and user who make this order (create order cash on delivery)
    - Bonus : Online Payment

- **User**

  Register , login , reset password , <mark>forget password</mark>

- **Registered User**
  - Can edit, delete his own info
  - Can search for products
  - Can make orders (buy products & each order has products)

- **UnRegistered User (Anonymous)**
  - can see any product
  - Can't search
  - Can't make orders

- **UnRegistered Seller(Anonymous)**

  - Can't see , edit , delete , create products

Bonus
- Use github
- deploy your work to the web. (Use vercel and mongo atlas).
